

COVID-19 Trends in RI

These graphs present trends in COVID-19 cases, hospitalizations, deaths, and positivity rates. Several charts are based on a 7-day moving average, which has the advantage of smoothing out unevenness that occurs over the course of a week.

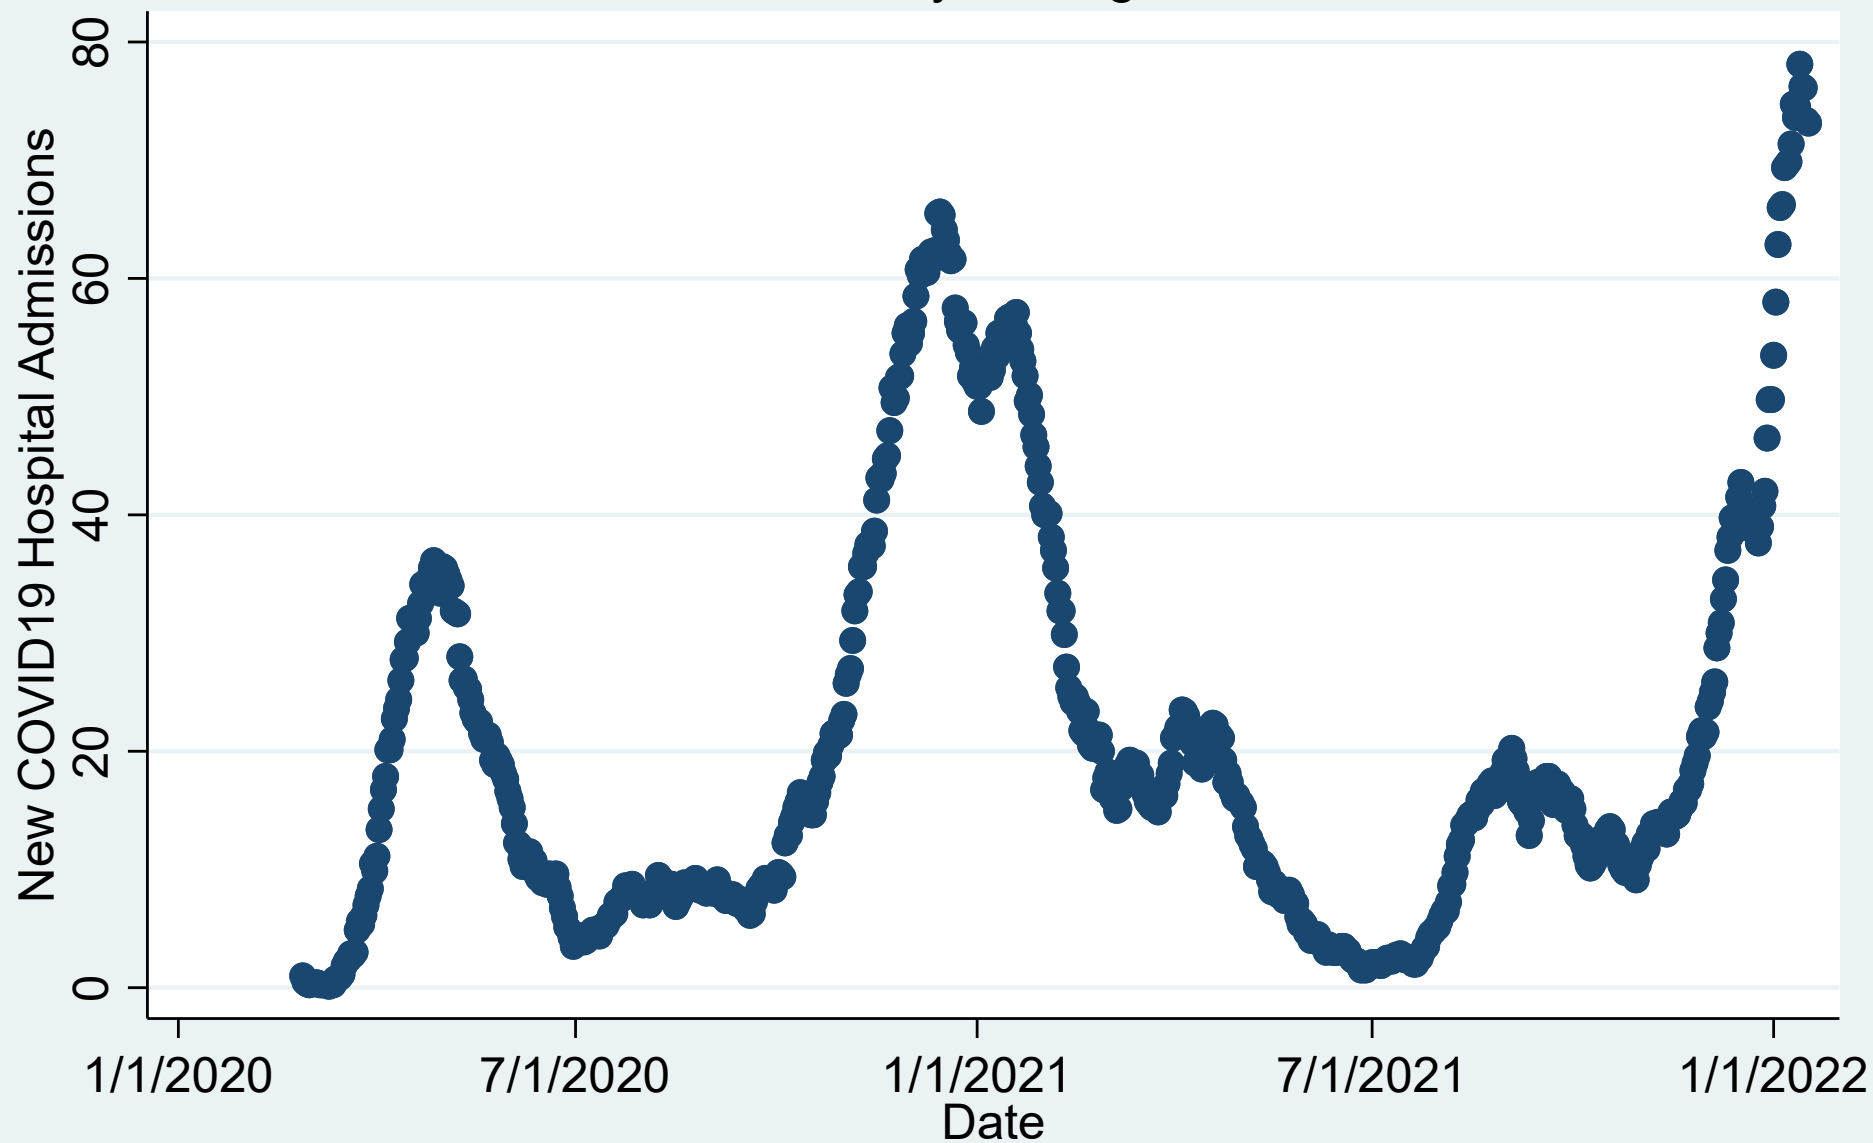

All graphics constructed with the Stata statistical package; data downloaded from health.ri.gov for values through 17th January 2022.

Note: We have suspended trend graphs for case counts and ratio of fatalities to cases, due to uncertainty in recording self-testing. For RI DOH case count data, see: <https://covid.ri.gov/>

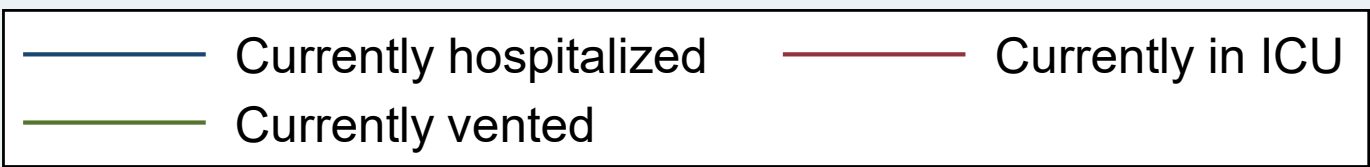

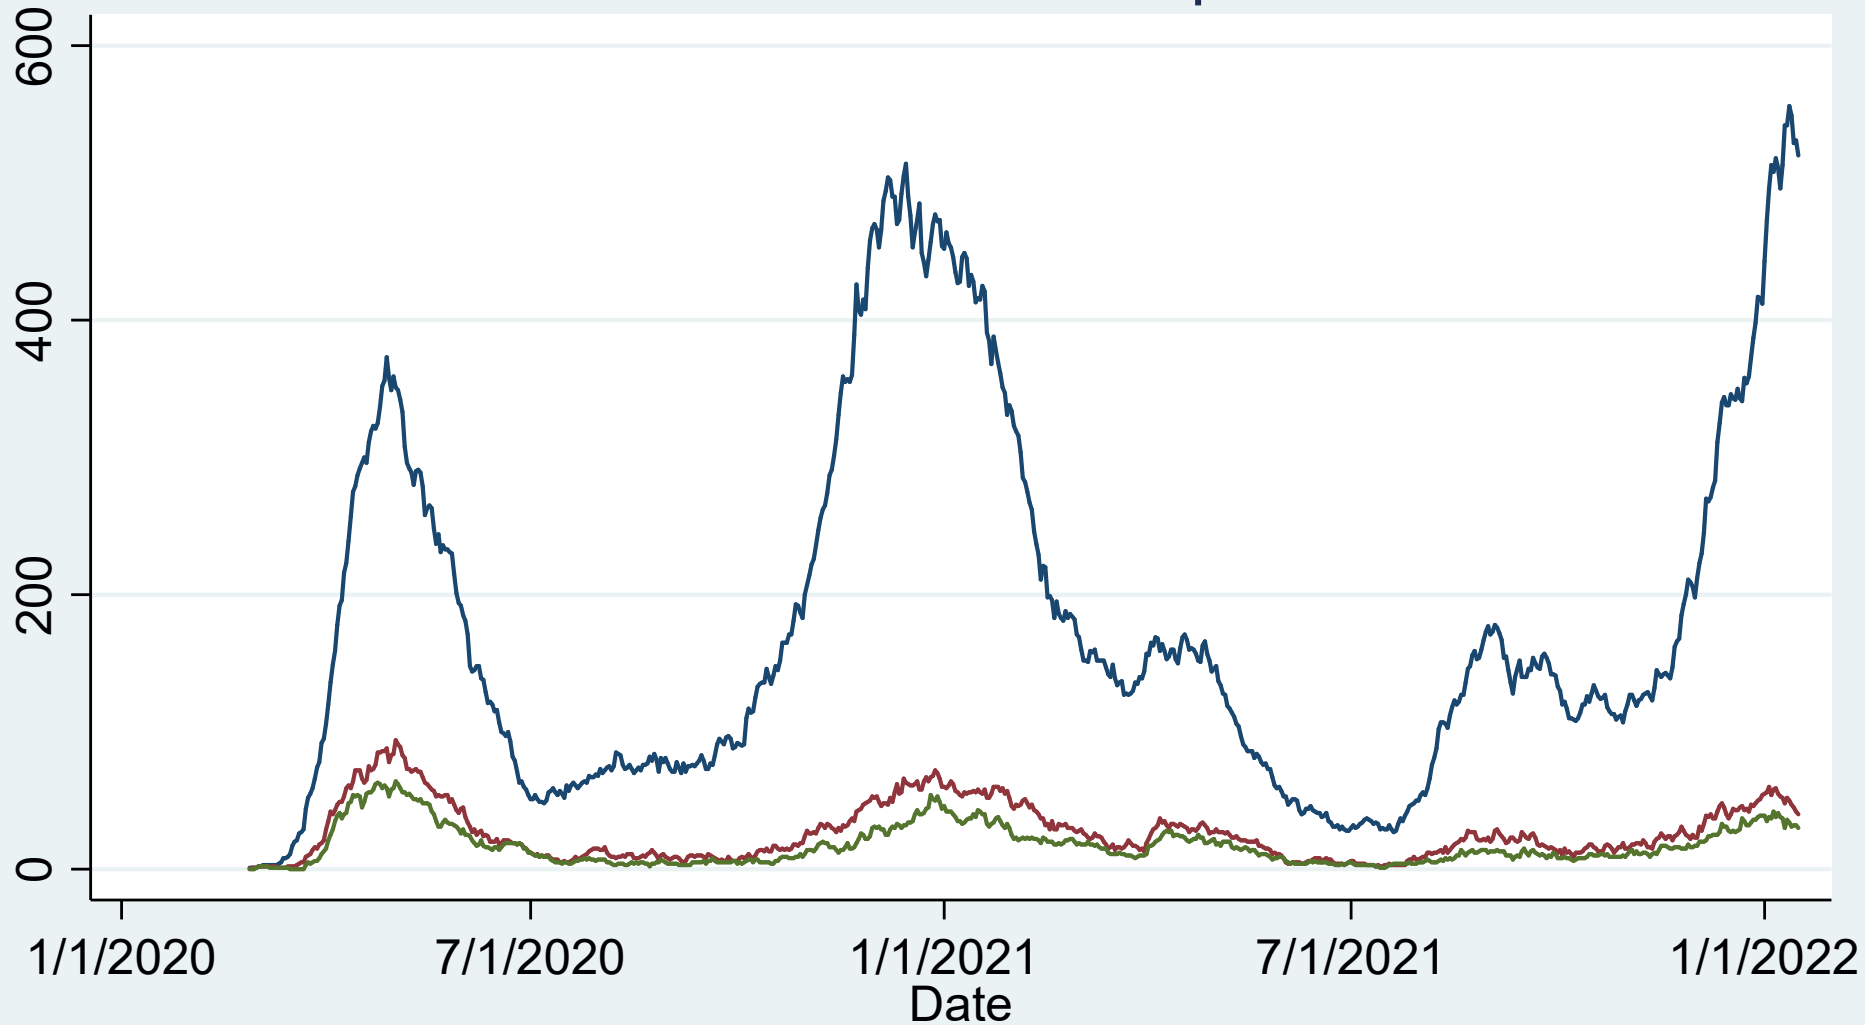

RI Trend in COVID19 Hospital Admissions

7 Day Average

RI Trend in COVID19 Hospitalization

RI Trend in COVID19 Deaths

7 Day Average
